Objects

JSON Structure

The general entity attributes are inherited from the base entity object, which is defined by the IEntity class (see entity.ts file).

Definition of Object data object can be found in object.ts file.

```
export interface IObject extends IEntity {
  class: EntityEnums.Class.Object;
  data: IObjectData;
}

export interface IObjectData {
  logicalType: EntityEnums.LogicalType;
}
```
